PROFESSIONAL SUMMARY

Full-stack software engineer with hands-on experience delivering backend systems, secure REST APIs, and AI-enabled tools for enterprise clients. Skilled in Java, Spring Boot, React.js, and Node.js, with a track record of automating manual workflows and cutting operational effort through practical, measurable engineering solutions. Builds AI-powered applications using Google Gemini, LLM integration, prompt engineering, and Retrieval-Augmented Generation (RAG). Comfortable working directly with client systems, diagnosing production issues, and communicating technical trade-offs to non-technical stakeholders — well suited to technology consulting and solution delivery work.

CORE SKILLS

- **Languages:** Java, JavaScript, SQL, C, C++, Python (basic)
- **Full-Stack Development:** React.js, Node.js, Express.js, Spring Boot, REST APIs, HTML5, CSS3
- **Databases:** PostgreSQL, MySQL, MongoDB
- **AI & Automation:** Gemini API, LLM integration, RAG, prompt engineering, AI-assisted code analysis, workflow automation
- **Security:** Spring Security, JWT, OAuth
- **Tools & Platforms:** Git, GitHub, Docker, Kubernetes, Linux, Postman, Maven

PROFESSIONAL EXPERIENCE

Intern Engineer Trainee — Comviva

Sep 2025 – Nov 2025

Bangalore, India

- Developed backend modules in Java and Spring Boot to support enterprise campaign processing and secure FTP-based data workflows for client systems.
- Root-caused a production FTP Proxy failure traced to Java WatchService's incompatibility with Docker/Kubernetes container filesystems, and resolved it by replacing it with a configurable Timer Poller — restoring reliable file transfers with no client-facing downtime.
- Integrated NGAGE Studio and Jira APIs with AI-generated test cases (~20 per topic across numerous topics), automating QA workflows and reducing manual test-case creation and verification effort.
- Built a Post Load Validation utility that automated dashboard metric calculation and pre/post data-load comparison, cutting manual reconciliation time per run by ~70% — directly reducing analyst hours spent on data QA.

SELECTED PROJECTS

AI Code Review Assistant — Java · Spring Boot · React.js · PostgreSQL · Gemini API · GitHub API · JWT/OAuth

- Designed and built a full-stack AI-powered code review platform that auto-syncs a user's GitHub repositories and generates on-demand AI code review reports using LLM integration to flag bugs, code smells, and security issues.
- Implemented secure GitHub OAuth authentication and JWT authorization with Spring Security, and designed REST APIs for repository management, review history, and user authentication.

Online Code Compiler — React.js · Node.js · Express.js · Judge0 CE

- Built a full-stack online compiler supporting 5 languages (Java, JavaScript, Python, C, C++) with a React/CodeMirror editor (syntax highlighting, multi-language tabs, shortcuts) and a Node/Express backend integrated with Judge0 CE for execution.
- Handled edge cases across standard I/O, compilation/runtime errors, execution time, and memory usage; deployed frontend on Vercel and backend on Render.

EDUCATION

B.Tech, Computer Science Engineering — Institute of Technical Education & Research (SOA University)

2022 – 2026

Bhubaneswar, Odisha | CGPA: 7.07
